

## Seven Steps for Hail Damage Repair

### Step 1– Roof Inspection

Your roof needs to be inspected by a Licensed Contractor prior to filing an insurance claim. A detail report of severe weather and/or hail damage needs documented, and photographed by Caputo Construction.

### Step 2– Contact Insurance Co.

Contact the insurance company to file a claim. A claim number will be assigned.

### Step 3– Insurance Adjustor Inspection

An adjustor inspects the reported roof for damages to determine if the claim is valid. We would like to be at that meeting.

### Step 4– Follow up with Insurance Company

The adjustor will submit a report for a valid claim. A Loss Summary Report will be forwarded to the property owner that provides details on the damages to be covered and the amount of the coverage. We then check insurance pricing against local codes, dimensions, shingle age of your roof.

### Step 5– Contractor Selection

A licensed contractor needs to be selected to complete the work. A contractor should have experience in building and repairing roofs. A contractor should be able to provide you with references and provide you with a written estimate related to the repairs and most important local reputable people.

### Step 6– Materials Arrive

With the contractor, the required materials will be selected. You will have options to upgrade some materials, make color choices and identify other improvements. Once the materials are selected, the materials are ordered and delivered to the residence after contract is signed and deposit received.

### Step 7– Construction

Within 3-4 weeks, we will arrive with a team to begin the repairs. The contractor should keep you updated on the status of the repairs. The work should be completed thoroughly and in accordance to the written insurance statement. We will clean the site daily, clean gutters inside and out and leave the area clear of debris once the job is completed.
